

DUNK TANK

SET UP

1. Select a level area for set up.
2. Slowly lift up and set tank upright. (Be careful not to drop tank onto its bottom.)
3. Swing wing out into position. NOTE: The wing MUST BE STRAIGHT out from the tank frame. If it is at an angle the trigger will not work properly. Lower the two stabilizing rods on the bottom of the wing so the wind does not move it as this will cause the target arm to jam.
4. Check drain plug to make sure it is tight and then fill tank to the top with water (approx. 500 gallons).
5. Place arm into the trigger mechanism. Put the other end through the hole in the canvas. Make sure the arm pin drops into the pivot point on the side of the frame. Insert the target into the threaded end of the arm turn to tighten.
6. With you hand “test” the target to see that it works properly. Check to ensure that the seat latch is engaging properly.
7. REVIEW SAFETY RULES WITH ALL PARTICIPANTS!

OPERATION

1. Check to see that seat is properly locked and is released when the target is pressed. Be sure to show this operation to the person who will be on the tank as they will need to know how to reset the seat and trigger mechanism each time it is released, before they get back onto the seat. Instruct them to use the grip handles for support when climbing up out of the tank. Also, be sure instruct the dunkee on the proper use of the seat safety latch, which is located behind the seat, to keep it secure until they are ready to be dunked. Please remind the dunkee to keep their hands on their knees and sit forward on the seat.
2. Use ONLY the balls that came with the EASY DUNKER.
3. Monitor water level to keep it full.
