

Single Burners

1. These Big John Products are designed FOR OUTDOOR USE ONLY!
2. Prior to lighting the utility stove, place all control knobs in the "CLOSED" position as marked on the control panel.
3. Open main cylinder valve. Hold a lit butane gun next to a burner and turn the far right control knob to "ON". The burner will ignite instantly. The second and third rings will instantly light by simply turning their control knobs to "ON".
4. Each burner ring is individually operated by its own control knob. Any combination of ring use or temperature setting is possible.

When finished cooking, disconnect the propane cylinder from the stove.
